The fast CRP test to support correct treatment decisions on the go!

With the current situation of the COVID-19 pandemic in Europe under 1.5% of the patients tested for COVID-19 are positive\(^1\). Thus, in addition to targeted COVID-19 testing, supportive testing for patients with respiratory tract infection symptoms should be used to ensure the correct treatment decision. CRP can assist in differentiating between bacterial and viral infections. Antibiotics do not work for viral infections and can only be used for treating bacterial infections.\(^2\)

The use of supportive testing to distinguish between bacterial and viral infection reduces misuse of antibiotics and lowers the risk of antibiotic resistance and optimizes patient care.\(^2\)

---

**Fast**
- Quantitative CRP result in 2 minutes
- One-step Sample Collector and small sample volume enable fast and easy testing
- Minimal hands on time
- Short start up time of the instrument

**Reliable**
- Accurate results at POC – comparable to laboratory results
- Thousands of QuikRead go instruments are in use worldwide

**Flexible**
- Sample is stable in the test buffer for 2 hours, carry the instrument or carry the sample!
- The reagents are ready to use and can be stored at 2–25°C

**Transportable**
- Battery use
- Weighs only 1.7 kg
- Wireless data transfer to HIS/LIS is possible
- Enables test performance near the patient
