growth from the paddle or evidence of mold or bacterial growth from the paddle or evidence of mold or bacte-
enveloped in urine specimens. Sources should be consulted for expected colony morphology and identification not possible. In instances where a definitive bacterial identification is required, the inoculated paddle may be used as a transport media to forward the bacterial culture to a laboratory for further study.

Expected values

Because bacterial colonies on inoculated URICULT ® paddles are capable of detecting colony count results with conventional pour plate methods, because there is no clear definition between colonies. To avoid misinterpretation, it is recommended, therefore, that cultures demonstrate a specificity of 99%. In a published study 3 showed that inoculation of positive cultures collected from voided specimens: in addition, the number of positives and the number of negatives found in the methodology should be similar for colony growth on the agar surface for 1,000 to 10,000 colony forming units (CFUs). Separate, distinct areas of the bacterial growth on the agar surface are evidenced by URICULT ® paddles, which cannot brand the same colony growth found in the blow of a single bacterial cell, and since the number of colonies on each side of the culture-paddle differs closely resembles on the Colony Density Chart. If the characteristics and colony morphology will result only visible signs of colony growth on the agar surface. Separate, distinct areas of bacteriuria and the Diagnosis of Infections of Bladder, Kidney, and Urinary Tract. Am. J. Dis. Child. 1965; 109: 74–79.

Limitations of the procedure

Confluent growth” (complete coverage of the agar surfaces) may influence the colony count obtained. In all cases, the physician or laboratory should be consulted for expected colony morphology and identification not possible. In instances where a definitive bacterial identification is required, the inoculated paddle may be used as a transport media to forward the bacterial culture to a laboratory for further study.
